

You will need: this base board and a pot of 10 objects. 3 or 4 counters (or buttons).

Tiddlywink addition:

Press one counter onto the edge of another to move it. Repeat until it lands on a number. This is the first number in your calculation. Take another counter and do this again. This is the second number in your addition calculation.

Write your calculation down.

Collect the matching number of objects to solve the calculation.

If you are confident, you could flick a third counter – remember to write the matching calculation accurately.
